

Building Energy Efficiency: Best Practice Policies and Policy Packages

A report from the GBPN and Lawrence Berkeley National Laboratory

October 2012

This report surveys and analyses the use of building energy codes, energy labels and financial instruments in China, the EU, India and the USA. The systematic review offers shared experience and best practice that will be a crucial part of policy to reduce energy use and CO₂ emissions in the buildings sector, which is growing dramatically in China, India and developing countries.
